

Thermal Engineer

GexCon US is seeking to strengthen our accident investigation team. We are looking for a well qualified person with a MS or PhD degree in mechanical, chemical, aero/astro, electrical or fire protection engineering and a strong background in thermal and fluid sciences, who has an analytical approach and good written and oral communication skills. The candidate should be prepared for some travel. The successful candidate will be expected to manage projects, interact with clients, go on site inspections, plan and implement experimental test programs, and write technical reports.

The following skills are not required but will be considered a “plus”:

- Strong technical background in combustion and/or fire dynamics
- Experience in developing and performing experimental plans to test hypotheses

GexCon US offers a generous benefit package including fully paid Health/Dental, Paid Vacation and Holidays, 401k, disability insurances and much more.
